

Pizza Sales Analytics 2015 — Analysis & Recommendations

This document accompanies the Power BI dashboard (.pbix). It summarises the key findings from the 2015 transaction dataset and provides actionable business recommendations.

Executive KPIs

Metric	Value
Total Revenue	\$817,860.05
Total Quantity Sold	49,574
Total Orders	21,350
Average Order Value	\$38.31
Average Pizzas per Order	2.32

Key highlights

- Peak revenue day: **27 Nov 2015** with **\$4,422.45** (consistent with late-November holiday/Black Friday demand).
- Lowest revenue day: **22 Mar 2015** with **\$1,259.25**.
- Strongest day of week by revenue: **Friday** (\$136,073.90 total across the year).
- Highest order volume hours: **12:00–13:59** (lunch peak) and **17:00–19:59** (dinner peak).
- Order mix: **38%** single-item vs **62%** multi-item orders.

1. Sales trends and anomalies

Trends were reviewed at daily, weekly, and monthly grain to identify seasonality and unusual spikes/drops. The dashboard includes drill-down capability for date-level investigation.

Total Sales by Month

Total Sales by Day

Total Sales by Hour

Interpretation & recommendations

- Staff and production planning should prioritise **Fridays** and the **lunch (12–14)** and **dinner (17–20)** peaks.
- Plan promotional calendars around high-demand months (notably mid-year) and late-November spikes.
- Investigate low-performing days for operational causes (reduced trading hours, supply issues, or marketing gaps).

2. Product performance

Category and SKU performance were assessed by both volume (quantity) and value (revenue) to support pricing, promotion, and menu optimisation decisions.

Pizza Categories Ranked by Quantity and Total Sales

Category	Total Quantity	Rank	Total Sales	Rank
Classic	14888	1	220,053.10	1
Supreme	11987	2	208,197.00	2
Veggie	11649	3	193,690.45	4
Chicken	11050	4	195,919.50	3

Top and bottom pizzas (by quantity)

Most Popular Pizza by Quantity

Name	Total Quantity	Rank ▲
The Classic Deluxe Pizza	2453	1
The Barbecue Chicken Pizza	2432	2
The Hawaiian Pizza	2422	3
The Pepperoni Pizza	2418	4
The Thai Chicken Pizza	2371	5

Least Popular Pizza by Quantity

Name	Total Quantity	Rank ▲
The Brie Carre Pizza	490	1
The Mediterranean Pizza	934	2
The Calabrese Pizza	937	3
The Spinach Supreme Pizza	950	4
The Soppressata Pizza	961	5

Top and bottom pizzas (by revenue)

Most Popular Pizza by Revenue

Name	Total Sales	Rank ▲
The Thai Chicken Pizza	\$43,434.25	1
The Barbecue Chicken Pizza	\$42,768.00	2
The California Chicken Pizza	\$41,409.50	3
The Classic Deluxe Pizza	\$38,180.50	4
The Spicy Italian Pizza	\$34,831.25	5

Least Popular Pizza by Revenue

Name	Total Sales	Rank ▲
The Brie Carre Pizza	\$11,588.50	1
The Green Garden Pizza	\$13,955.75	2
The Spinach Supreme Pizza	\$15,277.75	3
The Mediterranean Pizza	\$15,360.50	4
The Spinach Pesto Pizza	\$15,596.00	5

Recommendations

- Prioritise availability and marketing for consistent top performers (e.g., Classic Deluxe, BBQ Chicken, Thai Chicken).
- Review bottom performers for potential re-pricing, bundling, recipe adjustment, or menu rationalisation.
- Use category mix to balance margin and throughput: **Classic** leads in both volume and revenue, while **Chicken** and **Supreme** have higher average prices.

3. Size and ingredient analysis

Size preference differs by category and can inform production planning and menu design (e.g., size availability, upsell paths). Ingredient analysis identifies the drivers of demand within each category.

Revenue by size within category

Most popular ingredients by category (top 5 by quantity)

Most Popular Ingredients

Recommendations

- Ensure inventory safety stock for high-frequency ingredients (e.g., garlic, tomatoes, onions, mozzarella).
- Use size preference to drive upsell: where L dominates (e.g., Veggie), promote meal bundles and add-ons; where S dominates (Classic), promote multi-buy or upgrade-to-M offers.
- Consider ingredient-led promotions by category (e.g., pepperoni and bacon for Classic) to align with customer preferences.

4. Ingredient and pricing correlations

Correlation views help segment ingredients and categories into comparable groups for decision-making (core drivers vs niche, premium vs volume).

Total Quantity and Total Revenue by Ingredients

Average reference lines: Quantity = 4,195, Revenue = \$70,740.33.

Avg Pizza Price and Total Quantity by Category

Recommendations

- Ingredients in **High Qty / High Rev** are operationally critical: negotiate supplier pricing and ensure continuity.
- **Low Qty / High Rev** ingredients represent premium/niche items: protect margin and consider targeted marketing rather than blanket discounting.
- Category pricing vs volume indicates where price sensitivity may exist; test promotions on higher-priced categories to lift volume without eroding overall margin.

5. Order behaviour (frequency and timing)

Order composition and ordering cadence support staffing decisions, production batching, and channel optimisation.

Single-item orders: 8,111 (38%); Multi-item orders: 13,239 (62%).

23.3 Average Minutes Between Orders

Recommendations

- Because multi-item orders dominate, optimise bundles and family deals around peak periods to increase average order value.
- Order cadence shows a heavy concentration of short gaps with occasional long gaps; use this to set production batching rules and staffing micro-rosters during peaks.
- Monitor changes in cadence after promotions to validate demand lift versus cannibalisation.
